Zm X Zm self-blastn with sequences present 40X in the genome masked. Axes are in genes from annotated pseudo-molecules 10-09. Tan angles=bias. Sequence from 3-09 Zm pseudomolecules. Repeat using SynMap in CoGe. Green lines are higher ks and are not alpha tetraploidy; see text.
Zm XZm with sequences present 40X in the genome masked. Axes are in bps. Sb7 could not be seen to measure. Tan angles = bias. Sequence from 3-09 Zm pseudomolecules. Repeat using SynMap in CoGe.
