Figure IV

The figure shows the expression levels of c-fos and c-jun gene transcripts over time following the addition of DRB and TPA in the presence or absence of TSA.

(i) Graph showing the % mRNA remaining of c-fos over time for different conditions.

(ii) Graph showing the % mRNA remaining of c-jun over time for different conditions.

The top panel displays gel images of c-fos, c-jun, and GAPDH mRNA levels under various treatments, with DRB and TPA applied at different time points and in combination with TSA.
