Welcome to Aperta™, our new manuscript submission platform for PLOS Biology (our other journals will follow soon).

To get started, sign in with your PLOS account. You can create a PLOS account if you don’t have one already.
Once you sign in, you will see your list of active manuscripts. You can check the status of manuscripts you previously submitted, edited, or reviewed. You can also create new submissions, accept or decline invitations to review, or act as an academic editor.
The manuscript page is divided into two columns. The width of the columns can be easily adjusted.

Your manuscript is automatically converted from the source files (DOC and DOCX to start) and the figures are placed inline.

The Submission Cards are on the right.
The Submission Cards represent the tasks associated with the manuscript. Completed cards have green check marks, whereas unchecked cards need action. Click on any card to open and edit or view the information about the task.

There are fewer Submission Cards for initial submissions to expedite the upload process. Authors notified that their manuscript will pass to peer review will be asked to complete more Submission Cards.
When you have completed a card, click “I am done with this task”. A green check mark will appear next to the task and you can move on to the next one. You can complete the cards in any order you prefer.
If you want to make changes to a completed card, click “make changes to this task”. You can edit cards until you submit your manuscript for review.
Aperta automatically creates PDF versions of manuscripts, including placing the figures inline above their respective legends.

Click the Downloads link to access all available manuscript versions for review.
To compare earlier versions of the manuscript, click Versions in the upper right hand side. This will allow you to quickly compare the original submission (R0) with later versions (R1, R2, etc.).
Aperta is in active development, so please send us feedback on your experience at any point using Aperta’s feedback link. You can also email your suggestions and input to apertasupport@plos.org.
