

Figure S6 Comparison of grouping of drugs by probabilistic sparse matrix factorization (PSMF), protein complex (PC)-based hierarchical clustering and strain-base hierarchical clustering. The red arrow indicates drugs comprising a specific factor obtained by PSMF. (A) Group of drugs comprising factor 6. (B) Group of drugs comprising factor 5. The original factorgram images in the paper by Parsons et al [5] were used in this figure

Desipramine

Neomycin.sulfate Raloxifene

Actinomycin

Staurosporine — Caspofungin — Latrunculin.B — Cytochalasin.A — Hygromycin.B

Alamethicin Papuamide.B
