Supplementary material to E. Paquet, G. Rey, and F. Naef (PLoS Computational Biology).

Figure S5. E1-E2 enhancers in Δ19 Clock mutants.
Specificity of the E1-E2 signal in Clock mutants in liver (left) and smooth muscle (right). CLOCK/BMAL1-induced or repressed genes are taken from the supplementary material in (Miller, 2007). While the liver samples show a weak tendency for CLOCK/BMAL1-induced genes to show stronger E1-E2 sites, the smooth muscle data does not discriminate between repressed or induced genes.
