Figure S6

The figure illustrates two curves representing expression amount over time. The key features are:

- **Peak Time Difference**: The time difference between the peaks of the two curves.
- **Amplitude Difference**: The difference in expression amount between the two curves at the peak.
- **Duration Difference**: The absolute difference in time between the end points of the two curves, calculated as $|T1 - T2|$.

The diagram shows two curves with labels for time and expression amount, highlighting the above mentioned differences.
