S9 Fig. Slide, Roll and Twist values associated to conformational combinations of facing phosphate linkages in representative BII-rich steps, generated by Parmbsc0\_cOLI and CHARMM36.

The values of Slide, Roll and Twist were calculated for representative BII-rich steps, CpG\_CpG of Oligos 1, 3 and 4 (green), GpC\_GpC of Oligos 1, 2, 3 and 4 (violet) and TpA\_TpA of Oligos 1, 3 and 4 (orange) according to the BI\_BI, BI\_BII|BII\_BI and BII\_BII combinations of their facing phosphate groups. The data were extracted from C-MDs (top panels) and P-MDs (bottom panels), and averaged along the MD for each backbone state. For clarity, the standard deviations were omitted.
