S9 Fig. Relative expression levels of rice GA biosynthesis-related and signal transduction-related genes in young NIL-\textsuperscript{GNP1\textsuperscript{TQ}} and NIL-\textsuperscript{GNP1\textsuperscript{Tq}} panicles (~1 cm) at early panicle initiation to booting stage.

Values are means ± s.d. (n = 4, each with 6 plants). Asterisks represent significant difference determined by Student’s t-test at $p$-value < 0.001 (**), $p$-value < 0.01 (**), not significant (n.s.).
