The graphs show the log2-fold expression levels for different genes and conditions. The x-axis represents the different genes (CG7759, CG30026, Drip, CG7763) under the tub-Gal4, ELAV-Gal4, and Crz-Gal4 conditions. The y-axis represents log2-fold expression levels, ranging from -12 to 0. The data points indicate that the expression levels are significantly reduced under all conditions, with the lowest expression observed under Crz-Gal4 for CG7759 and CG7763.
