**S4 Fig. Functionality of the HA tagged Ace2 protein.** To verify the functionality of C-terminal HA-tagged Ace2 the phenotypes of three isolates of strain CLvW004 (ACE2-HA/ace2) was compared to mutant strain MK106 (ace2/ace2), wild-type strain BWP17 (ACE2/ACE2) and the heterozygous strain CLvW001 (ACE2/ace2). (A) Drop dilution assay for sensitivity to 4 µM Pmt1-inhibitor and resistance to antimycin A (20 µg/ml). The agar plates were photographed after 2 d incubation at 30 °C. The ace2 mutant strain Mk106 shows enhanced sensitivity to the Pmt1-inhibitor [49] and is less susceptible to the respiratory inhibitor antimycin A [30]. (B) Colonies of the indicated strains were photographed following growth for 2 d at 30 °C on YPD agar. The ace2 mutant strain Mk106 shows the wrinkled colony phenotype described previously [27]. Phenotypes of strains CLvW004.1-3 correspond to the heterozygous strain CLvW001 indicating that the Ace2-HA protein is functional.
