S5 Fig. **Self-recovery of fecundity after heat stress is improved when males have scented the plates for more than 12 hours.** We allowed males to scent the plates used for heat stress and recovery of hermaphrodites for increasing amounts of time: less than 12 hours (10 minutes - 24 plates, 2 hours - 25 plates, and 12 hours - 25 plates, for a total of 74 plates), 16 hours (25 plates) and 48 hours (50 plates). Error bars denote ±SD among separate trials. Results described by white columns are from data presented in Fig. 1B. See S1 Table for numbers of independent trials and worms tested in each trial.
