S5 Fig. Midfacial module landmark configuration.

Determination of the midfacial module using the RV coefficient\(^1\). (A) The landmarks used in the midfacial module (yellow). (B) The total connections among landmarks tested. (C) The distribution of the RV coefficient for random subsets of landmarks. The red arrow shows the location of the selected subset from that distribution. (D) The shape change that corresponds to the first principal component of the midfacial module.
