Figure S3. Root hair length of 16-day-old seedlings.

Average root hair length of 10% longest root hairs (n > 100) of 16-day-old seedlings grown vertically on ½ MS medium with or without 100 mM NaCl. Seedlings were transferred to such agar plates 5 days after germination from ½ MS agar plates without (Mock) or with SA187. Only root hairs that emerged after the seedling transfer were measured. Error bars represent SD. Asterisks indicate a statistical difference based on the Student’s t-test (*** P < 0.001).
