

Figure S1. Representative PCR-validations of homozygous deletion. **(A)** 3p24.1 deletion. *TGFR2*, located within the presumptive homozygous deletion, is PCR-amplified from normal genomic DNA, but not from pancreatic cancer xenograft P224. **(B)** 9p21.2 deletion. *MOBK2B*, within the deletion, is PCR-amplified from normal genomic DNA but not from P201.
