

S2 Fig. Intersection of genomic binding sites for Efg1 and HA-Efg1 under hypoxia and normoxia. For Efg1, genomic binding sites were derived from ChIP chip experiments comparing strains CAF2-1 (*EFG1/EFG1*) and HLC52 (*efg1/efg1*); for HA-Efg1, strains HLCEEFG1 (*efg1/efg1* [*HA-EFG1*]) and CAF2-1 were compared. Normoxic binding sites for HA-Efg1 were obtained from Lassak *et al.* [40]. The shaded circle encompasses genes in filamentous growth.
