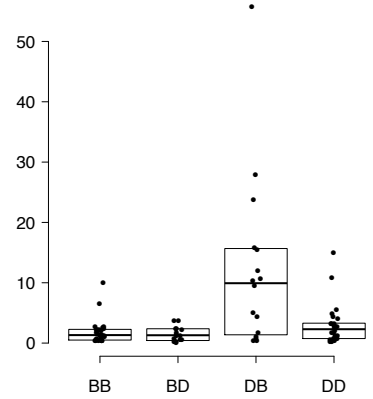
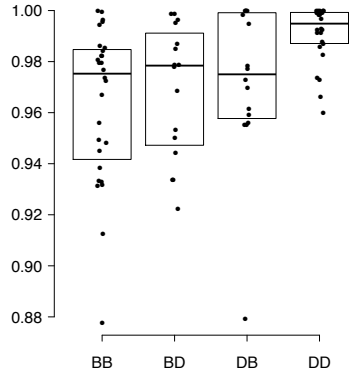
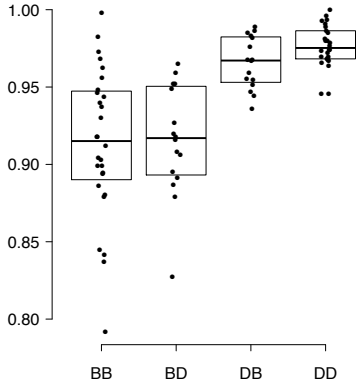
Time spent not moving in center
first min (AC)
(Sign of correlation with anxietv unclear)*



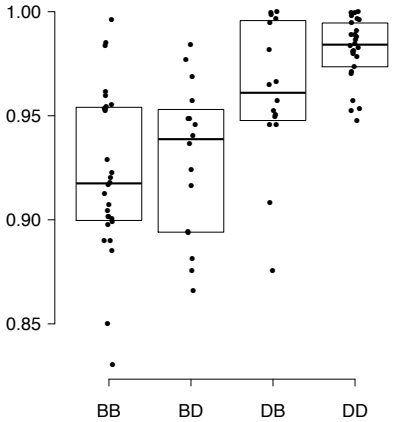
Proportion of not moving time in periphery
min 2 to 5 (AC)
(Positively correlated with anxiety)



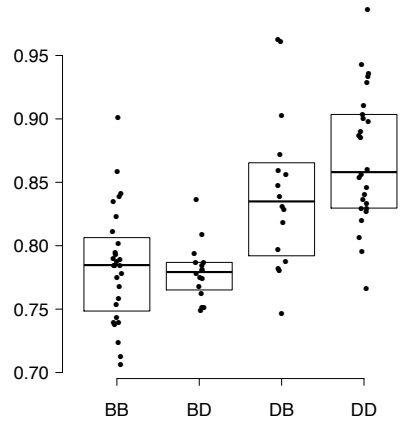
Proportion of not moving time in periphery
min 6 to 30 (AC)
(Positively correlated with anxiety)

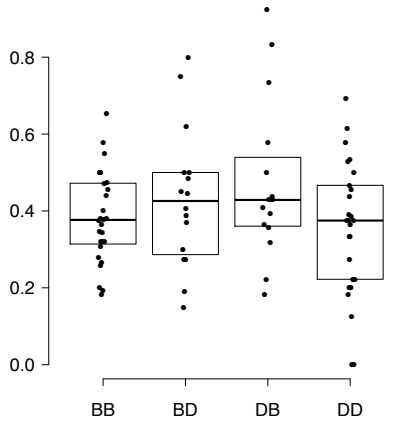


Proportion of time in periphery
min 2 to 5 (AC)
(Positively correlated with anxiety)



Proportion of ambulatory time in periphery
min 6 to 30 (AC)
(Positively correlated with anxiety)





Proportion of entries
in open arms (EPM)
(Negatively correlated with anxiety)
