Figure S2. Antibody reactions (P/N ratios) of 55 patients using the ICB ELISA with all four DeP antigens. Samples of 24 patients with DENV-1 infection (A) and samples of 13 patients with DENV-3 infection (C) were tested with competition. Data in B (11 patients with DENV-2 infection) and D (7 patients with DENV-4 infection) were tested without competition and were taken from figure 2. P/N values were calculated using OD values/cut-off values.
