Figure S4: Gel filtration chromatography on a Superdex 200 column of protein extract from Caco-2 cells treated with 200 μM of SsCEI 4. The Superdex 200 column was calibrated using a set of gel filtration protein standards, including thyroglobulin (670 kDa), bovine γ-globulin (158 kDa), chicken ovalbumin (44.0 kDa), equine myoglobin (17.0 kDa) and vitamin B₁₂ (1.35 kDa). The bars and indicate the enzymatic activities of the proteasome (700 kDa) and APEH (300 kDa).
