Figure S3. Power for Scenario set II for gene A. Power is shown for several different methods, including several options within each of the regularization methods. WE, VT and SKAT are shown in red, PCR in purple, PLS in green, RR in turquoise, LASSO in royal blue and SPLS in pink. Scenarios II.1 to II.6 are described in Table 2. Suffix “k” implies that the number of components $k$ was chosen to explain 80% of the variance.
