Figure S1. *Alport mice exhibit progressive proteinuria in an age-dependent manner.*

(a) Urinary protein excretion was assessed by 12% SDS-PAGE followed by CBB staining. Urine samples were collected from 26-week-old (wk) WT or 24-week-old (wk) male Alport mice (ALP). (b) Urinary protein excretion was gradually dysregulated in Alport mice. Urine samples were collected from 7-, 16-, or 24-week-old Alport mice. Arrows indicate urine albumin. BSA: bovine serum albumin.
