Figure S3

Graph showing relative contraction strength against wavelength (nm) for various conditions:

- ChR2 HR 0.5mW/mm²
- C1C2 5-2 0.5mW/mm²
- C1V1 0.2mW/mm²

The graph on the left compares the relative contraction strength across different wavelengths for the mentioned conditions. The graph on the right provides a closer view of the contraction strength changes at specific wavelengths.

Statistical significance indicated by:
- * for p < 0.05
- ** for p < 0.01
- *** for p < 0.001
