Figure S5.

(A) Normal vs. low-grade (L-GS) and high-grade (H-GS) glioblastoma (GS) with a significant difference in normalized log₂ intensity: $P = 0.012$.

(B) Normal vs. L-GS and H-GS with a significant difference in β value: $P = 0.039$. 

Sample sizes: Normal (n=29), L-GS (n=94), H-GS (n=36), Met (n=19).
