Supplementary Figure S2. Definition of ERG+ and ERG- prostate cancer tissues based on their ERG expression levels. ERG expression levels were assessed for every prostate cancer tissue included in the meta-analysis. All cancer tissues of one study were divided into 3 groups based on their ERG expression level: ERG+, ERG intermediate and ERG- tissues. ERG intermediate tissues (gray boxes) were excluded from further analyses. ERG+ tissues were compared to ERG- tissues. The studies performed by Bermudo et al. and Varambally et al. were excluded because of their small sample numbers (n=21 and n=7, respectively).
