Figure S4, Related to Figure 6: NDP Protein Is Expressed in Late-Onset AD Brains.

**A.** Description of samples utilized for Fig 6A,B and panel B. CERAD and Braak staging refer to amyloid load and extent of neurofibrillary tangles respectively. **B.** qPCR of *NDP* expression in area BA38 of control and AD patients as in Fig 6. Values are the average of technical replicates (3; error bars represent SEM) normalized to GAPDH and the average value of the 5 control lines. Black bars (1-5) are controls and red bars represent AD patients (6-16). **C-E,** Expression of *NDP* in a Late-Onset AD Brain, showing NDP DAB reactivity in neuronal cytoplasm and axons (**C**), neuronal nuclei (**D**) and some neurofibrillary tangles (**E**).
