Figure S1. Relative expression of cytokine genes in monocyte/macrophage subsets. Expression of IL-1β (*Il1b*), TNF-α (*Tnf*), TGF-β (*Tgfb1*) and VEGF (*Vegfa*) was determined from FACS-sorted day 14 Ly6C<sup>hi</sup> and Ly6C<sup>low</sup> wound monocytes/macrophages by qPCR. Data are shown as the ratio of gene expression in Ly6C<sup>hi</sup> cells relative to Ly6C<sup>low</sup> cells. A dashed grey line placed at a fold change of 1 is indicative of equal expression between subsets. Data shown are the mean ± SD, n = 3 mice per group.
