Figure S7
Delayed formation of hydrogen peroxide (H$_2$O$_2$) in 0.22 µm filtered water samples exposed to natural sunlight. Samples were used for exposure experiments directly after sampling. Filled circles represent H$_2$O$_2$ concentrations filled triangles for samples obtained from wells inside the acidic fen. Water samples were obtained on 2$^{nd}$ September 2008 from the SW basin. Error bars indicate the standard deviation of three analysed samples.
