Supplementary Figure S10. Superimposition of homology-modeled structures of aqMutL-CTD with the various template X-ray structures. The model structure generated by using the template structures of bsMutL-CTD with NMR secondary structure constraints is colored by gray. The model structures templated by using bsMutL-CTD (blue), NgoL MutL-CTD (purple) and PMS1-CTD (green) without NMR constraints are also shown with the monomeric structures.
