Figure S1. Quiescent cells that have internalized QDs remain fluorescent over a broad range of temperatures. Competent AB734 cells were incubated with 0.5 µg/mL of BB-CT43-stabilized nanocrystals, washed and centrifuged as described in the main text. Pellets were photographed under UV light (top panel). The cells were resuspended in 1 mL of PBS and incubated at the indicated temperatures for 24h, before being centrifuged and photographed as above.
