Figure S2. Quiescent cells that have internalized QDs remain fluorescent over time. AB734 cells were incubated with 0.5 µg/mL of BB-CT43-stabilized nanocrystals, washed and centrifuged as described in the main text. Cells were resuspended in 1 mL of LB medium or PBS. Photographs show the fluorescence of cell samples (50 µL) after the indicated incubation times at 37°C in LB or PBS. Fluorescence was quantified as described in Materials and Methods.
