</tbody>
</table>

No.1-2 are the original parents of the fine mapping population, No.3-42 are the accessions with short stigma length, and No.43-82 are the accessions with long stigma length. All stigma length data are given as the mean ± SD (summer 2014, Nanjing, China).
Jiangsu, China). *, ** indicate the least significant difference at a 0.05 and 0.01 probability level compared with Nipponbare by $t$ test, respectively.
