Figure S8. β-actin-SRG3 Tg and CD2-SRG3 Tg mice showed no significant difference in TGFβ production of DCs and macrophages in response to LPS stimulation.

(A-B) WT, β-actin-SRG3 Tg, and CD2-SRG3 Tg mice were i.p. injected with LPS (2 μg) or vehicle. Sixteen hrs later, intracellular TGFβ production was assessed in (A) splenic CD11c⁺ DCs and (B) macrophages (CD11c⁻ CD11b⁺F4/80⁺) via flow cytometry. The means ± SD are shown in the graphs (n=3; *P<0.05).
