S5 Fig.

- F1+alum
- F2+alum
- F3+alum
- TcdA rRBD+alum

Plot showing tcdA RBD-specific IgG titer (Log_{10}) for different groups. The x-axis represents different groups: F1+alum, F2+alum, F3+alum, and TcdA rRBD+alum. The y-axis represents the titer on a logarithmic scale. The data points are indicated with different symbols (e.g., circles, squares, triangles), and the error bars represent the standard deviation. The horizontal lines indicate significant differences, with asterisks indicating significance levels: * (p < 0.05), ** (p < 0.01), and *** (p < 0.001).
