S1 Fig. Representative flow cytometry analysis of CD4+ and CD8+ T cells and of CD4+ Tregs from human fresh heparinized peripheral blood. CD4+ and CD8+ T cells were gated from the lymphocytes gate. Naïve T cells were defined as CD45RA+ CD62L+ cells, central memory (CM) T cells as CD45RA- CD62L+, effector memory (EM) T cells as CD45RA- CD62L-, and terminally differentiated (TEMRA) T cells as CD45RA+ CD62L-. Activated memory Tregs (AM) were defined as CD45RA- HLA-DR+.
