Flow chart for data availability

13,954 live born offspring who survived to one year

9,600 available maternal alcohol data at age 4 years

6,927 offspring with information on SDQ conduct problems

6,063 – 6,450 information on partner alcohol use at age 4 years

5,359 - 5,654 partner information with all confounders

6,927 information on maternal alcohol use at age 4 years

6,014 maternal information with all confounders

*Figure S1a. Flowchart showing available data for trajectories of childhood conduct problems and partner alcohol consumption at age 4 years*
Figure S1b. Flowchart showing available data for adolescent depressive symptoms and partner alcohol consumption at age 4 years.

13,954 live born offspring who survived to one year

9,600 available maternal alcohol data at age 4 years

5,539 offspring with information on at least 2 depression measures

4,887 – 5,181 information on partner alcohol use at 4 years

4,335 – 4,558 partner information with all confounders

5,539 information on maternal alcohol use at 4 years

4,837 maternal information with all confounders
Figure S1c. Flowchart showing available data for adolescent depressive symptoms and partner alcohol consumption at age 12 years.
