S4 Fig. Reduced mixing: Medium and low transmission

Note: Development in the median prevalence of MRSA shedders over time (includes only iterations where MRSA became established). Transmission was reduced 180 days after MRSA had been introduced.

Mat = mating unit, Gest = gestation unit, Far = farrowing unit, Wean = weaner unit, Fin = finisher unit.

No buff = no use of buffer sections, Red. Mix = Reduced mixing – two litters are put into one pen together in the weaners unit, instead of random mixing of piglets, Litterwise = weaners and finishers are only sharing pens with pigs from the same litter as themselves.
