S8 Fig. Sensitivity analysis: Transmission on the day of birth.

Note: Development in the median prevalence of MRSA shedders over time. High transmission and no intervention. Mat = mating unit, Gest = gestation unit, Far = farrowing unit, Wean = weaner unit, Fin = finisher unit. Panel A-D illustrate the influence of a gradual reduction of transmission between sow and offspring on the day of birth from 75% of the original value (B) to 0% of the original value (D).
