

Table S1. Taxonomic samples used in study, including Barcode of Life Database (BOLD) and GenBank accessions. Also listed is the presence (+) or absence (-) of the NlaIII (N) and BamHI (B) restriction enzyme sites of the 'NB system' [24], determined from the sequence data (i.e. not by performing the assay).

Identification	BOLD ID	Specimen ID	Genbank No.	Institution Storing	Country	Locality	Publication	NB Haplotype
