

Table S6. Cox proportional hazard analysis of overall and progression-free survival of OvCa patients in relation to the morphologic feature value (Std_Ar_Bin2).

	Univariate analysis		Multivariate analysis*	
	Hazard ratio (95% CI)	P_1	Hazard ratio (95% CI)	P_2
Overall survival	0.502 (0.331, 0.763)	0.001	0.453 (0.291, 0.704)	4.3×10^{-4}
Progression-free survival	0.347 (0.141, 0.857)	0.022	0.263 (0.098, 0.705)	0.008

* Adjusted by age, grade and clinical stage.
