

Figure S8. *Pinf*EPICs inhibit Arabidopsis RD21.

Nicotiana benthamiana leaf extracts transiently overexpressing Arabidopsis RD21 (by agroinfiltration) were preincubated (30 min) with 40 μ M E-64 or with 1.2 μ M PinfEPIC1, PinfEPIC2B (Tian et al., 2007) or chicken Cystatin (Sigma) and then labelled with 4 μ M fluorescent DCG-04 for 2 hours. Proteins were separated on protein gels and fluorescent proteins were detected using a fluorescence scanner.
