

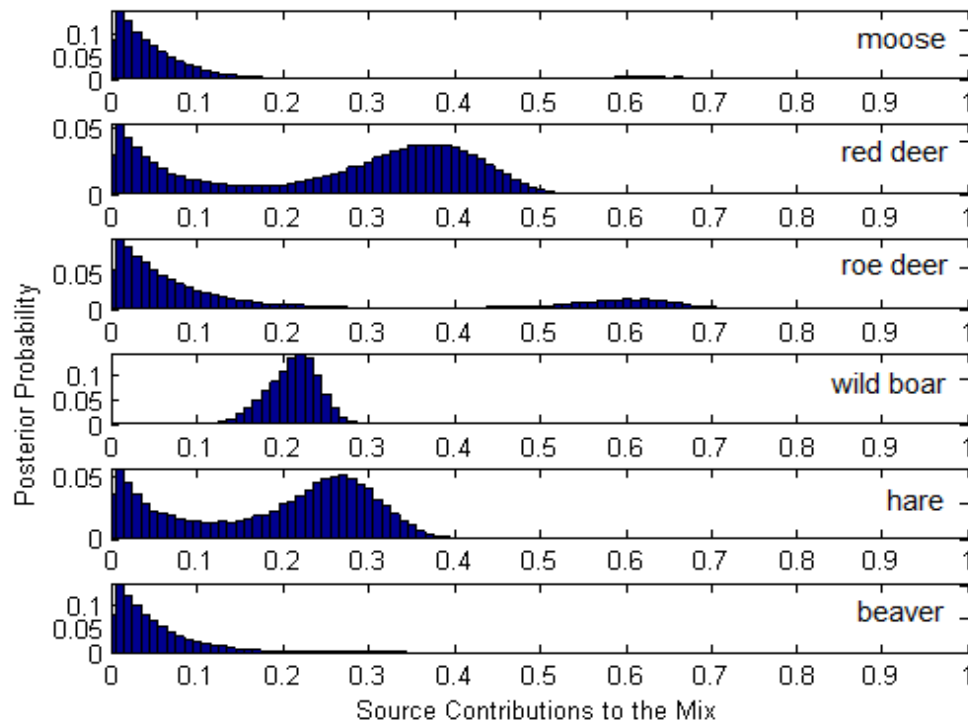

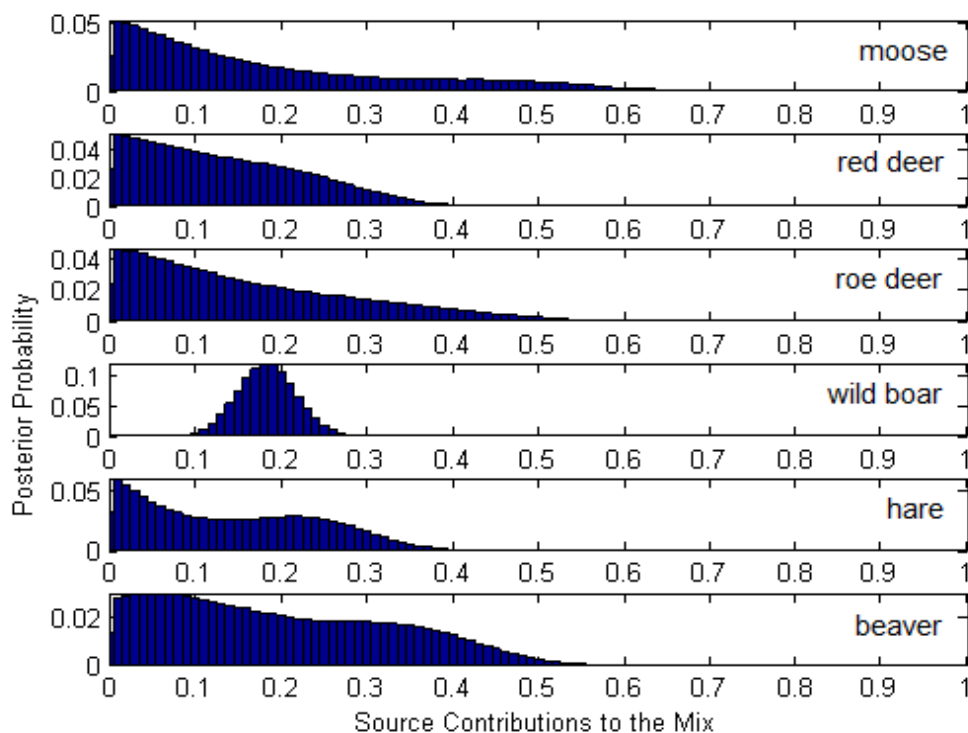

Figure S1. Distributions of posterior estimates of proportional contributions of prey sources in diet of Eastern European wolves inferred from the stable isotope data using MixSIR for: four subpopulations delimited based on mtDNA variability (MIT 1-MIT 4), two subpopulations delimited based on microsatellite variability (NUC 1, NUC 2), and the entire population.

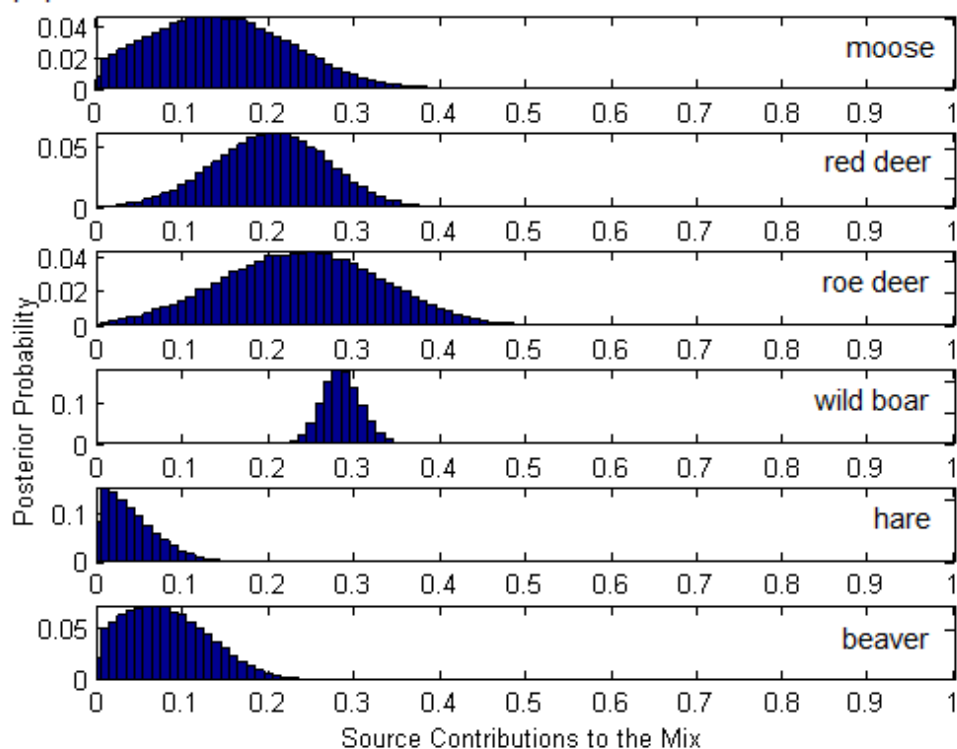

subpopulation MIT 1

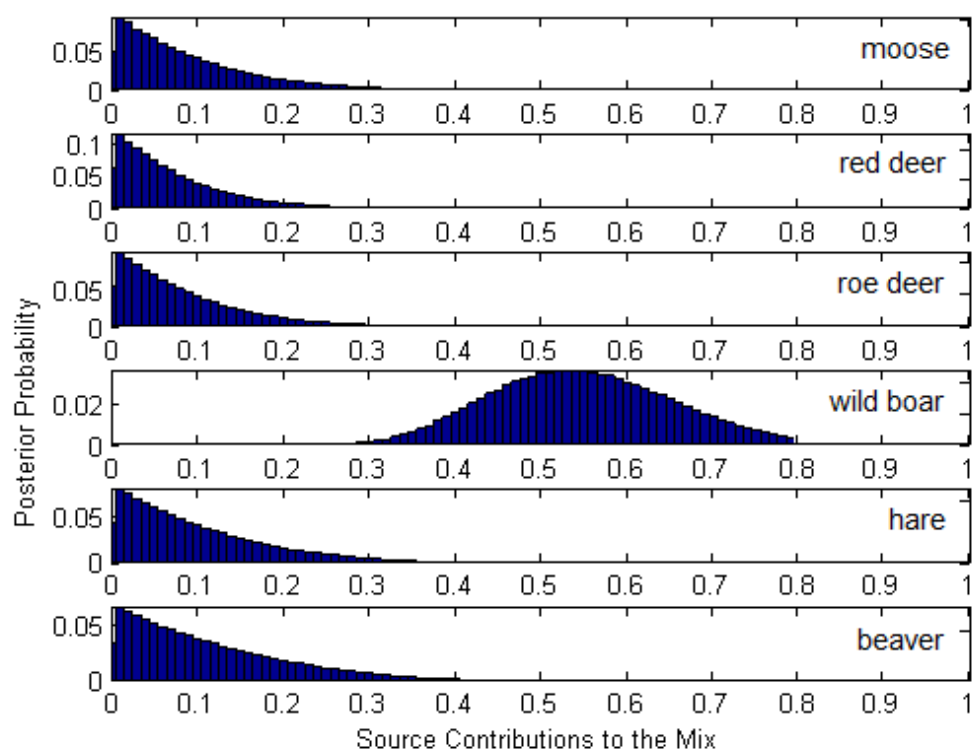

subpopulation MIT 2

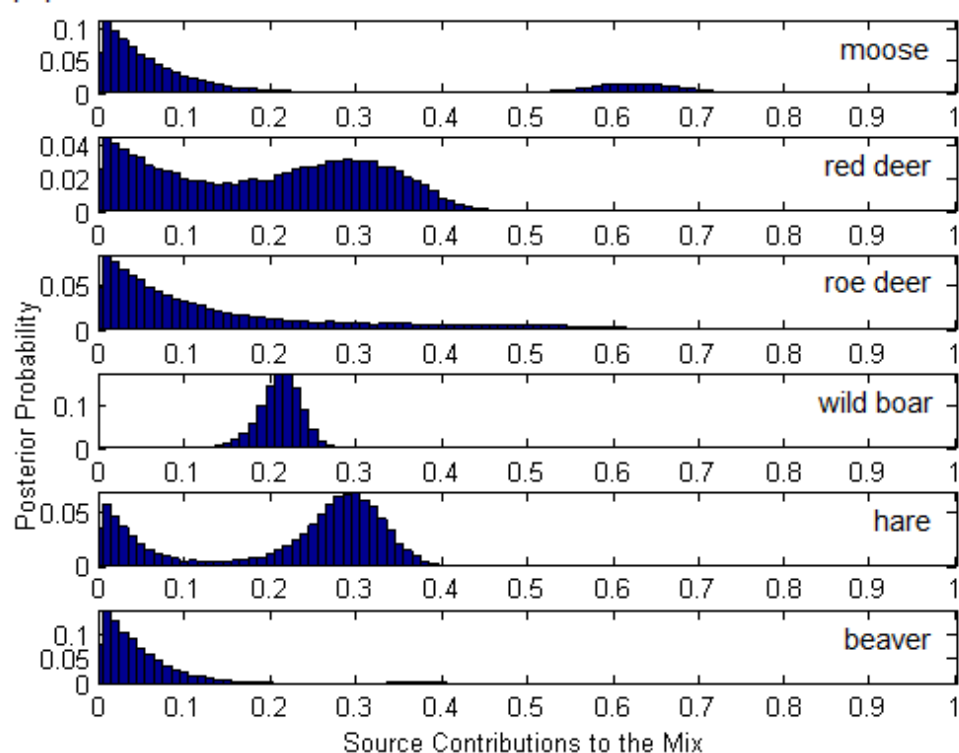

subpopulation MIT 3

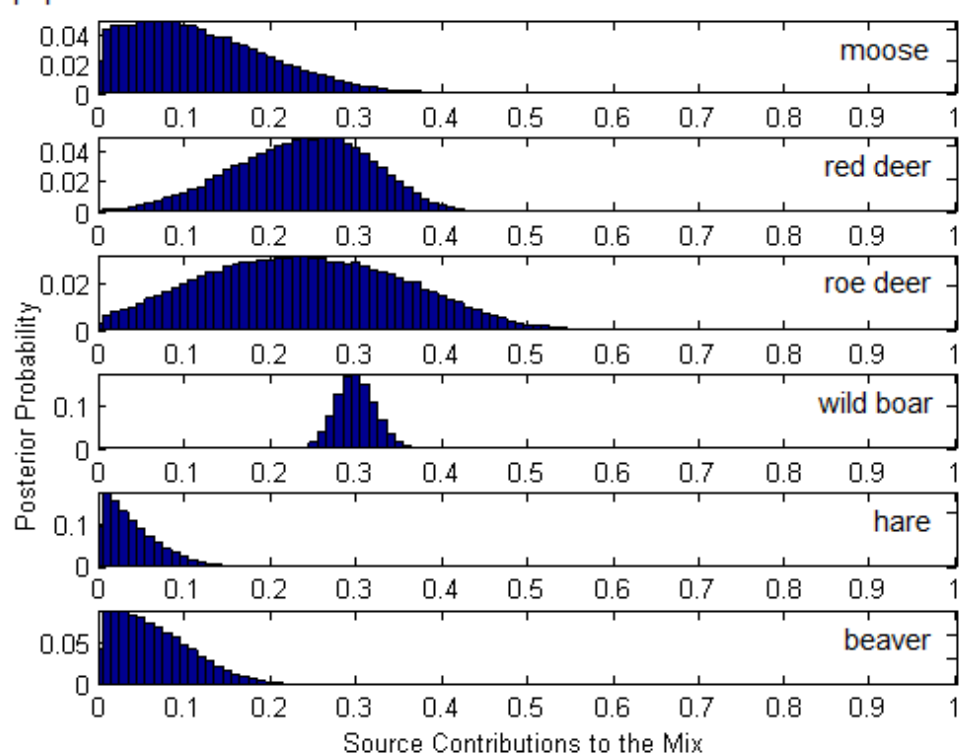

subpopulation MIT 4

subpopulation NUC 1

subpopulation NUC 2

entire population
