Higueruelo et al FIGURE S1

Supplementary Figure S1. Normalized distributions of the ratio of polar contacts (represented by polar/[polar+apolar]), each chart compares synthetic small molecules against the others. (A): synthetic versus natural small molecules with and without phosphor. (B): synthetic versus approved and oral drugs. (C): synthetic versus small peptides, obligate and transient protein-protein dimers, homo and hetero quaternary protein-protein interfaces. (D): synthetic versus PPI inhibitors.
