TREND Statement Checklist

Paper Section/ Topic	Item No	Descriptor	Reported?	
			\checkmark	Pg #
Title and Abstr	act			
Title and Abstract	1	 Information on how unit were allocated to interventions 	Х	Abs:Met
		Structured abstract recommended	Х	Abs:Met
		Information on target population or study sample	Х	Abs:Met
Introduction				
Background	2	Scientific background and explanation of rationale	X	Intro
		Theories used in designing behavioral interventions	na	
Methods	•		•	<u> </u>
Participants	3	Eligibility criteria for participants, including criteria at different levels in		Meth:
·	Ū	recruitment/sampling plan (e.g., cities, clinics, subjects)	Х	P&SL
		 Method of recruitment (e.g., referral, self-selection), including the 		Meth:
		sampling method if a systematic sampling plan was implemented	Х	P&SL
		Recruitment setting	Х	Meth:
		Settings and locations where the data were collected	Х	P&SL, Design
Interventions	4	• Details of the interventions intended for each study condition and how		Meth:
		and when they were actually administered, specifically including:	Х	Design
		 Content: what was given? 	Х	Meth:
		 Delivery method: how was the content given? 	Х	Design
		 Unit of delivery: how were the subjects grouped during delivery? 	Х	Meth: Des
		 Deliverer: who delivered the intervention? 	Х	Meth: P&S
		 Setting: where was the intervention delivered? 	Х	Meth: P&
		• Exposure quantity and duration: how many sessions or episodes or		Meth:
		events were intended to be delivered? How long were they intended to last?	Х	Design
		 Time span: how long was it intended to take to deliver the 	Х	Meth:
		intervention to each unit?		Design
		 Activities to increase compliance or adherence (e.g., incentives) 	na	
Objectives	5	Specific objectives and hypotheses	Х	Meth: Des
Outcomes	6	Clearly defined primary and secondary outcome measures	Х	Meth: De
		 Methods used to collect data and any methods used to enhance the quality of measurements 	Х	Meth: Desi PL, FAs, O
		 Information on validated instruments such as psychometric and biometric properties 	na	
Sample Size	7	How sample size was determined and, when applicable, explanation of any		
		interim analyses and stopping rules	na	
Assignment Method	8	 Unit of assignment (the unit being assigned to study condition, e.g., individual, group, community) 	na	
		Method used to assign units to study conditions, including details of any	na	
		 restriction (e.g., blocking, stratification, minimization) Inclusion of aspects employed to help minimize potential bias induced due to non-randomization (e.g., matching) 	na	

TREND Statement Checklist

				1 1
Blinding (masking)	9	 Whether or not participants, those administering the interventions, and those assessing the outcomes were blinded to study condition assignment; if so, statement regarding how the blinding was accomplished and how it was assessed. 	na	
Unit of Analysis	10	 Description of the smallest unit that is being analyzed to assess intervention effects (e.g., individual, group, or community) 	na	
		 If the unit of analysis differs from the unit of assignment, the analytical method used to account for this (e.g., adjusting the standard error estimates by the design effect or using multilevel analysis) 	na	
Statistical Methods	11	Statistical methods used to compare study groups for primary methods outcome(s), including complex methods of correlated data	Х	Meth:Sta
		 Statistical methods used for additional analyses, such as a subgroup analyses and adjusted analysis 	na	
		Methods for imputing missing data, if used	na	
		Statistical software or programs used	Х	Meth:Stat
Results				
Participant flow	12	 Flow of participants through each stage of the study: enrollment, assignment, allocation, and intervention exposure, follow-up, analysis (a diagram is strongly recommended) 	Х	0
		 Enrollment: the numbers of participants screened for eligibility, found to be eligible or not eligible, declined to be enrolled, and enrolled in the study 	Х	Ohline Supplement:
		 Assignment: the numbers of participants assigned to a study condition 	Х	ement:
		 Allocation and intervention exposure: the number of participants assigned to each study condition and the number of participants who received each intervention 	Х	Figure 1 in
		 Follow-up: the number of participants who completed the follow- up or did not complete the follow-up (i.e., lost to follow-up), by study condition 	х	File S1
		 Analysis: the number of participants included in or excluded from the main analysis, by study condition 	Х	
		 Description of protocol deviations from study as planned, along with reasons 	na	
Recruitment	13	Dates defining the periods of recruitment and follow-up	Х	Meth: P&S
Baseline Data	14	Baseline demographic and clinical characteristics of participants in each study condition	Х	Results
		Baseline characteristics for each study condition relevant to specific disease prevention research	Х	Results
		Baseline comparisons of those lost to follow-up and those retained, overall and by study condition	na	
		Comparison between study population at baseline and target population of interest	Х	Results
Baseline equivalence	15	• Data on study group equivalence at baseline and statistical methods used to control for baseline differences	Х	Meth:Stats

TREND Statement Checklist

Numbers analyzed	16	• Number of participants (denominator) included in each analysis for each study condition, particularly when the denominators change for different outcomes; statement of the results in absolute numbers when feasible	X	Meth:Stats, Results
		 Indication of whether the analysis strategy was "intention to treat" or, if not, description of how non-compliers were treated in the analyses 	X	Meth:Desi
Outcomes and estimation	17	• For each primary and secondary outcome, a summary of results for each estimation study condition, and the estimated effect size and a confidence interval to indicate the precision	Х	Results
		Inclusion of null and negative findings	X	alts
		 Inclusion of results from testing pre-specified causal pathways through which the intervention was intended to operate, if any 	X	Results
Ancillary analyses	18	 Summary of other analyses performed, including subgroup or restricted analyses, indicating which are pre-specified or exploratory 	Х	ults
Adverse events	19	 Summary of all important adverse events or unintended effects in each study condition (including summary measures, effect size estimates, and confidence intervals) 	na	
DISCUSSION				
Interpretation	20	• Interpretation of the results, taking into account study hypotheses, sources of potential bias, imprecision of measures, multiplicative analyses, and other limitations or weaknesses of the study	X	Discussion
		 Discussion of results taking into account the mechanism by which the intervention was intended to work (causal pathways) or alternative mechanisms or explanations 	X	ssion
		• Discussion of the success of and barriers to implementing the intervention, fidelity of implementation	X	Dis
		Discussion of research, programmatic, or policy implications	Х	Discussion
Generalizability	21	 Generalizability (external validity) of the trial findings, taking into account the study population, the characteristics of the intervention, length of follow-up, incentives, compliance rates, specific sites/settings involved in the study, and other contextual issues 	X	ion Discussion
Overall Evidence	22	General interpretation of the results in the context of current evidence and current theory	Х	Ission
