

S1 Table: Sensitivity analysis results following omission of the predictor biological parenthood: Odds ratios from the reduced multivariable prediction model for long-term depression

Variable	Category	OR	(95% CI)	p-value
Sex				0.004
	Male	1.00		
	Female	1.85	(1.22-2.82)	
Employment status at time of loss				0.004
	Not on sick-leave nor unemployed	1.00		
	Sick-leave	2.79	(1.49-5.23)	
	Unemployed	1.63	(0.57-4.71)	
History of psychological morbidity ^a				<0.001
	No	1.00		
	Debuting during the last 10 years, before loss	3.60	(2.07-6.25)	
	Debuting more than 10 years ago	5.10	(3.09-8.42)	
History of suicide in other biological relatives				0.051
	No	1.00		
	Yes	1.57	(1.00-2.47)	
Parent was deceased child's legal guardian during upbringing				0.100
	Yes	1.00		
	No	0.48	(0.20-1.15)	

^a Psychological treatment, psychiatric diagnosis, or medication against anxiety, or low mood or depression, before the child's suicide.
