

S1 Fig

S1 Fig. Upper panel: Raw data of Cs-137 values (left Y-axis in log scale) in seawater from the near-field ([2-30] km from FDNPP). Black dots: values above the LoD; vertical bars: censored values ($<\text{LoD}$). **Lower panel:** Filled diamonds and vertical bars: monthly averages + SD computed without the censored values (because they were either very few or more than 80%). Dark grey and light grey areas (right Y-axis): the total number of values and the number of censored values, respectively.
