

**Table A, S1 file****Characteristics of  $\delta^{15}\text{N}$  values and coagulation parameters from samples analyzed in this study.**

Variables were natural-log transformed to improve the normality of the frequency distributions. Skewness and kurtosis values are given for data before and after natural-log transformation of variables. For simplicity, only natural-log transformed dependent (coagulation) variables were used in regression analysis.  $\delta^{15}\text{N}$  was used as the independent variable and was not transformed. A variable with symmetrical distribution has a skewness of zero. The kurtosis for a standard normal distribution is three.

Variable	Untransformed Values				
	Mean $\pm$ S.D.	Median (IQR)	Range	Skewness	Kurtosis
$\delta^{15}\text{N}$ value (‰)	8.7 $\pm$ 1.3	8.4 (1.58)	6.1-14.5	1.06	4.26
sP-selectin (ng/mL)	34.6 $\pm$ 11.4	33.2 (14.3)	11.3-80.4	0.72	3.62
Clotting factor II (%)	107.4 $\pm$ 20.1	103.0 (22.0)	35.0-180.0	0.80	4.01
Clotting factor V (%)	81.6 $\pm$ 32.0	87.0 (38.0)	3.5-211.0	-0.47	3.05
Fibrinogen (ng/mL)	345 $\pm$ 106	333.0 (124.0)	142-842	0.70	4.37
PT (sec)	12.7 $\pm$ 1.61	12.7 (1.40)	8.0-25.0	1.91	14.2
INR	1.01 $\pm$ 0.17	1.00 (0.200)	0.6-2.5	2.47	19.3
PTT (sec)	33.8 $\pm$ 10.4	32.0 (6.00)	14-199	9.88	148.1
Natural Log-Transformed Values					
Variable	Mean $\pm$ S.D.	Median (IQR)	Range	Skewness	Kurtosis
$\delta^{15}\text{N}$ value (‰)	2.16 $\pm$ 0.14	2.13 (0.18)	1.81-2.67	0.66	3.28
sP-selectin (ng/mL)	3.49 $\pm$ 0.33	3.50 (0.43)	2.43-4.39	-0.27	3.19
Clotting factor II (%)	4.66 $\pm$ 0.18	4.63 (0.21)	3.55-5.19	-0.11	5.70
Clotting factor V (%)	4.27 $\pm$ 0.60	4.47 (0.46)	1.25-5.35	-1.87	6.53
Fibrinogen (ng/mL)	5.79 $\pm$ 0.32	5.81 (0.37)	4.84-6.74	-0.40	3.44
PT (sec)	2.54 $\pm$ 0.12	2.54 (0.11)	2.19-3.46	0.64	7.31
INR	$-4.02 \times 10^{-4} \pm 0.15$	0.00 (0.20)	-0.51-0.92	0.69	7.22
PTT (sec)	3.50 $\pm$ 0.20	3.47 (0.18)	2.64-5.29	2.23	21.2

**Table B, S1 file**

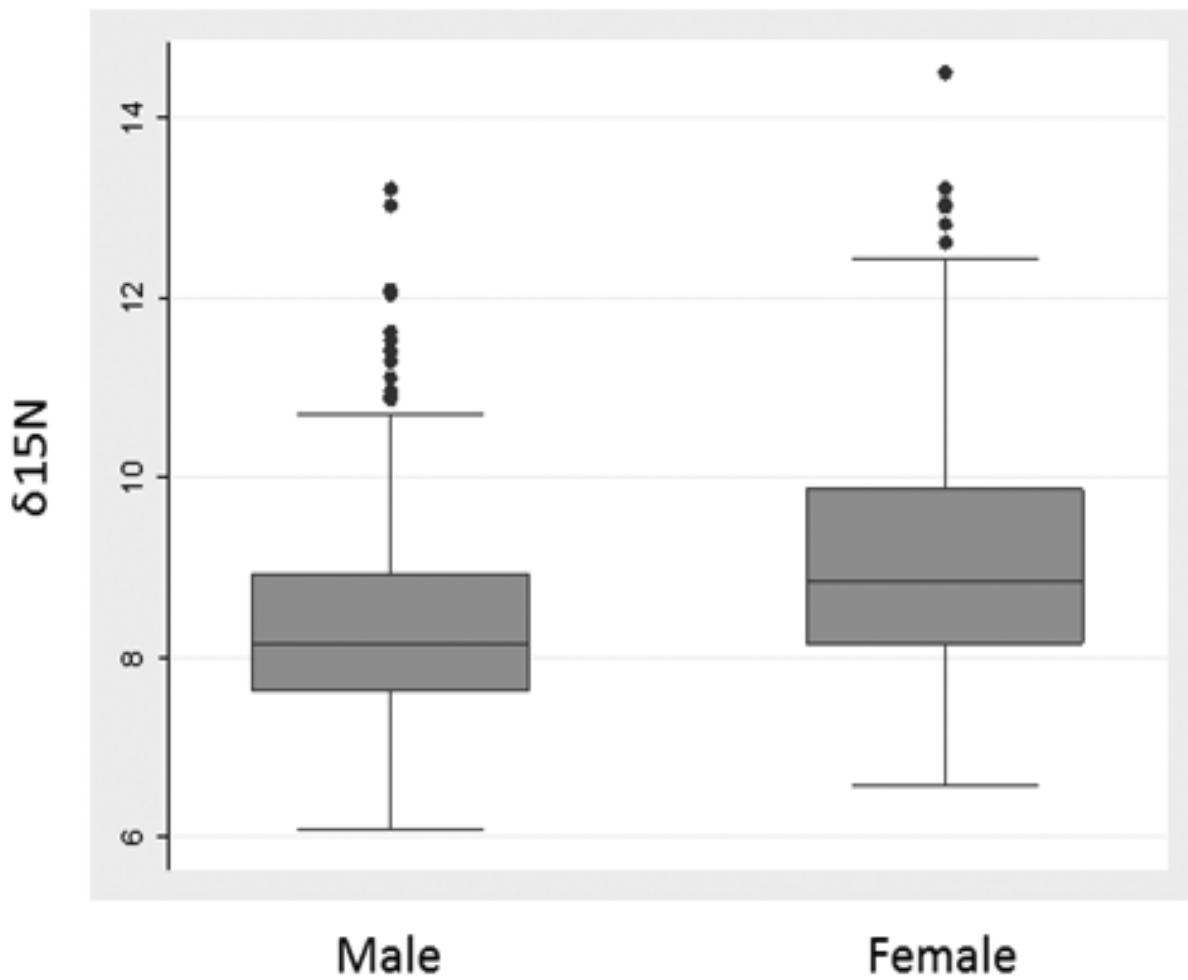

**Demographics for the participant group that provided samples for PIVKA-II analysis.**

Group	Sample Size	Age (years)	Age Range	% Female	% Coastal
All	682	36.2 ± 17.8	14-79	47.2	52.8
<i>CYP4F2*3</i>					
*1/*1	185	33.6 ± 17.6	14-79	48.6	63.2
*1/*3	329	37.1 ± 17.8	14-77	47.1	54.7
*3/*3	168	37.6 ± 17.8	14-79	45.8	37.5
<i>GGCX R325Q</i>					
CC	164	35.3 ± 17.2	14-77	53.7	53.7
CT	354	36.7 ± 18.1	14-78	47.2	50.3
TT	164	36.2 ± 17.8	14-79	40.9	57.3
<i>VKORC1 1173 A&gt;G</i>					
AA	433	35.9 ± 17.9	14-79	47.8	58.0
AG	199	36.8 ± 17.5	14-79	46.2	43.7
GG	50	37.4 ± 18.1	14-77	46.0	44.0

**Fig A, S1 file**

**Sex differences in  $\delta^{15}\text{N}$  values among Yup'ik participants.**

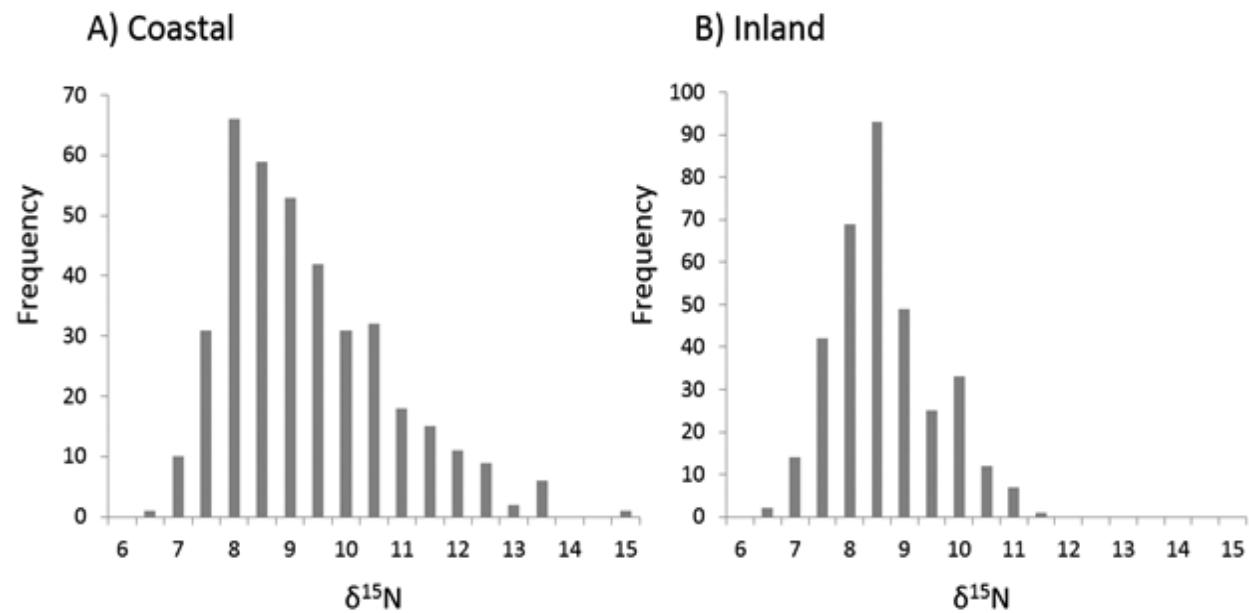

Females had higher  $\delta^{15}\text{N}$  values compared to males ( $P<0.001$ ). Median (IQR)  $\delta^{15}\text{N}$  for males was 8.2 (1.3) and for females was 8.8 (1.7).

**Fig B, S1 file**

**Distribution of  $\delta^{15}\text{N}$  values from study participants stratified by; A) coastal and B) inland communities.**

Coastal communities generally exhibited higher  $\delta^{15}\text{N}$  values (mean  $\pm$  S.D.,  $9.1 \pm 1.5$ ) than inland communities ( $8.4 \pm 0.9$ );  $P < 0.001$ .

**Fig C, S1 file**

**Effect of *CYP4F2* genotype on plasma vitamin K levels.**

Box-and-whisker plots comparing medians and IQRs of plasma VK1 concentrations for *CYP4F2*\*3. Statistical data are summarized in Table 3. Using a two-sided t-test for comparing natural-log transformed plasma VK1 values, P=0.005 for \*3/\*3 vs. \*1/\*1, p=P.685 for \*1/\*3 vs. \*1/\*1.
