S6 Fig. Bone marrow Env-specific antibody-secreting PB/PC assessed by ELISpot. PB/PC secreting Env-specific IgG (A) and IgA (B) over the immunization course and 2wkpi. Comparison of Env-specific IgG and IgA PB/PC for both immunization groups at wk 53 (C) and 2wkpi (D). The gp120 group was tested against monomeric gp120 and the gp140 group against oligomeric gp140. *p < 0.01. Due to the large number of tests performed, only differences with p values < 0.01 are shown in panels A and B. Mean values ± SEM are shown.
