

**Text S1.** Supporting information for Materials and Methods.

**Nucleotide sequence of the modified 343 bp promoter fragment of *Bs3* (343Bs3) used to test TAL effector activity on different EBEs in the *Agrobacterium*-mediated transient expression-based reporter assay in *N. benthamiana*.** PCR primer sites for cloning the 343 bp promoter region of the *Bs3* gene (GenBank: EU078684) are highlighted in grey. The substitution of A for C to introduce an *Nco*I site (underlined) is shown in bold. The cognate effector-binding element (EBE) for *AvrBs3* is italicized.

**>343Bs3 promoter: Modified from *Capsicum annuum* cultivar ECW-30R, GenBank: EU078684**
