

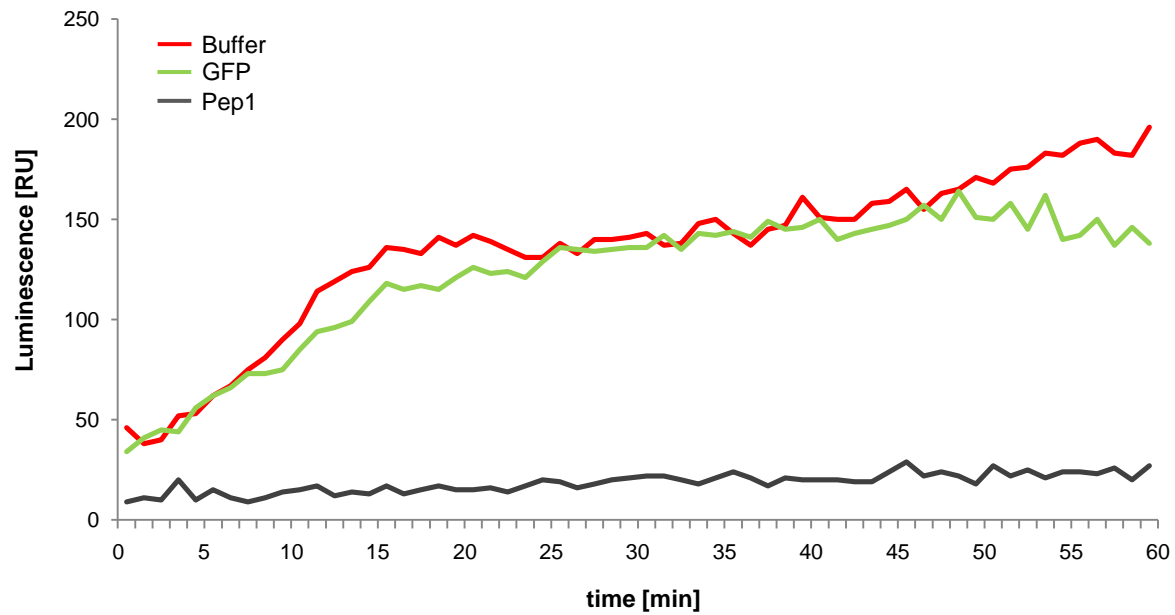

Figure S4

Supplementary Figure 4. Pep1 inhibits maize oxidative burst triggered by heat inactivated *Ustilago maydis* cells. Luminol based graphical representation of H_2O_2 production in maize leaf discs, elicited by the addition of 2×10^8 c/ml heat inactivated cells of *Ustilago maydis* strain SG200 at time point 1 min. Concentrations of recombinant Pep1 and GFP proteins: 10 μ M.
