

Figure S2. Levels of cytokines, ISGs, and chemokines in WT and KO DCs after WNV infection. qRT-PCR of WT, *Mavs*^{-/-}, *Ifnar*^{-/-}, and *Mavs*^{-/-} x *Ifnar*^{-/-} DKO DCs 24 and 48 hours after WNV infection. Relative RNA levels of IL-1β, IL-6, CCL5, IFIT1, IFIT2, and IFIT3 are shown and compared to uninfected cells. Mean values ± SD are shown. Asterisks indicate differences that are statistically significant (*, *P* < 0.05; **, *P* < 0.01).
