

1.1.1 Instrument F –Direct Observation Form

<<Instrument F Direct Observation Form>>

PI Name: PragmaMathema,Stephen Kodish

Study Title: Formative research to develop an infant and young child feeding (IYCF) intervention with micronutrient powder (MNP) for children aged 6 – 23 months

PI Version/Date: Version1.0/January 24, 2015

Date: _June 27, 2015_____Location: _ Lakumna community,GUYUK, LGA_____

Data Collector: Aisha Aliyu Dahiru_____Participant ID: __Mud house with Neem tree in front

Main goals of this direct observation are to answer the following questions:

1. In this household, what would be the best way(s) to give nutritional supplements to young children? Why?
2. In this household, describe the food sharing that you observe throughout the meal. Are there any predictable patterns?
3. In this household, who is favored and how is this favoritism expressed during meal preparation and eating?

(TEAR OFF AT PERFORATED DOTTED LINE BELOW)

PARTICIPANT ID: small hut with low verandah__

Household Composition Table (Fill out as you do data collection)

INITIALS	SEX (M/F)	AGE (estimated)	Relationship to household	Description
M	F	26YRS	Mother	Wearing pink shirt with plaited hair.
G	F	16 MONTHS	Baby girl daughter	Wearing brown dress
N1	F	26 YRS	Neighbour	Wearing yellow wrapper
N2	F	24 YRS	Neighbor	Wearing blue wrapper and carrying baby on her back
GM	F	70YRS	Grand mother	Wearing black shirt and a head tie
N3	F	29 YRS	Neighbour	Wearing purple stripped shirt with orange wrapper
OC	M	5 years	Older son	Wearing green shirt

Primary Questions (Complete after you complete data collection):

From what you have seen observing THIS HOUSEHOLD, please answer the following questions in detail:

Question	Write your <u>detailed</u> response here
<p>1. In this household, what would be the best way(s) to give nutritional supplements such as an MNP to young children to ensure compliance?</p> <p>Why?</p>	<p>The best way to ensure compliance is to educate and train the mother and grandmother on MNP.</p>
<p>2. In this household, who is favored during meal preparation or feeding?</p> <p>How is this favoritism expressed?</p>	<p>The parents and older child are favored during meal preparation and feeding because the food prepared was in solid state and they had separate bowls each.</p> <p>The baby was fed carefully and diligently.</p>
<p>3. How could we promote the MNP supplement for this family that would attract their attention?</p> <p>Who would they listen to?</p>	<p>MNP can be promoted to this household through the mother and the grandmother because the grandmother too was curious about the program, its benefits and how it will be used. I noticed that she has a say in the things that were going on in the household.</p> <p>It can also be promoted through the community leaders because the women were chatting on how he has encouraged them to</p>

	<p>accept such kind of help in the past to benefit themselves and their children.</p>
<p>4. In this household, what would be the best ways to promote the MNP but limit how much it would be shared?</p> <p>Why?</p>	<p>The best way to limit MNP sharing in this household is to ensure that the mother understands that is meant for the child that is 6 - 23 months only and should be given separately.</p> <p>Also, the mother should ensure child she feed the child MNP before her meal or after and ensure the older child does not try to eat part of it.</p>
<p>5. What other issues and concerns did you see with this family that are important for us to consider with regard to introduction of an MNP?</p> <p>Why?</p>	<p>The food prepared later in the day was solid and cannot be used to administer MNP.</p> <p>The mother was in charge of feeding the child.</p>

<p>6. Based on your experience observing this child today, do you believe reactivity negatively impacted your ability to see the food-related behaviors of the child?</p> <p>Please explain your answer in detail.</p>	<p>There was no reactivity during feeding because the mother said the child usually eats in the manner she ate.</p> <p>The child drank her kunu and ate the solid food with ease and ate mostly with her hands.</p>
